

Bentley Water Solutions

May 2009

Slavco Velickov, PhD
Water Industry Sales Director, EMEA

Agenda

1. Bentley Solutions
2. Water Industry Scope
3. Water Solutions Overview
4. Water Products Description
5. Application Examples
6. Demo
7. Contact Information

Solutions

Bridges

Buildings

Cadastre and Land Development

Campuses

Power Generation

Rail and Transit

Communications

Electric and Gas Utilities

Factories

Roads

Metals and Mining

Water and Wastewater

Oil and Gas

Bentley Solutions

1. Intra-operable infrastructure software portfolio
 - Multi-discipline built on a common V8i platform
 - Supports the Design-Build-Operate lifecycle
 - Encompasses the full spectrum of infrastructure
2. Professional services and learning
 - Support for implementation and all change issues
3. Professional communities networking
 - Local and global communication opportunities

V8i

NEW in Water and Wastewater Solution V8i

WaterGEMS delivers advanced functionality for GIS and model synchronization

Bentley Water includes enhanced reports, queries, multi-workflows and enterprise stores

WaterGEMS and **HAMMER** feature native support for Oracle spatial data model

WaterGEMS advances leakage calibration for locating leaks and quantifying background water losses

ProjectWise features significant performance improvements and linear reference system-based storage

StormCAD features seamless integration with GEOPAK and Bentley PowerCivil

Bentley Expert Designer Water supports high productivity design and dynamic cost estimating for potable water networks

The World of Water

Water: The next Oil ?

- Water is more vital for human life than oil
- Only 2.5% of water of the planet is usable
- Less than 3% of the world's Fresh Water is potable
- More than 20% of the world's people will not have access to freshwater by 2010
- Water infrastructure (clean and waste) is rapidly deteriorating in Europe
- Water is a \$400 Billion global industry !

The Water Industry Scope

- The **Water Industry** provides:
 1. Drinking water services
 2. Wastewater services (including sewage treatment) and
 3. Drainage and flood protection services

To: households, industry and governmental organizations.

- The Haestad family of products integrated within Geospatial framework is a backbone of the Bentley Water Solutions offer to the Water Industry market segments

The Urban Water Challenges

Source: D. Macaulay. 'Underground'. 1976

Water & Wastewater Industry Challenges

- Regulatory Compliance
 - Adequate Supply & Treatment capacity
 - Protecting Water Quality
 - Business performance
- Reliability
 - Consistently achieving target levels of services
 - Maintaining aging infrastructure
 - Avoiding failure
- Budget
 - Reducing costs while improving services
 - Asset investment planning for aging infrastructure
 - Aging workforce

The Water Solutions Product Map

Water

- WaterGEMS
- WaterCAD
- HAMMER
- Bentley Water V8 XM
- Geo Web Publisher for Water
- Expert Designer for Water
- PowerMap Field for Water

GIS, Mapping and Asset Management

- Bentley Water V8 XM
- Bentley Sewer V8 XM
- Bentley Cadastre
- IRAS / B
- Bentley Descartes
- Bentley CadScript
- Geo Web Publisher for Water Sewer
- PowerMap Field for Water Sewer

Sewer

- SewerGEMS
- SewerCAD
- FlowMaster
- Bentley OnSite
- Bentley WasteWater
- Bentley Sewer V8 XM
- PowerCivil
- InRoads Storm & Sanitary
- GEOPAK
- Geo Web Publisher for Sewer
- PowerMap Field for Sewer

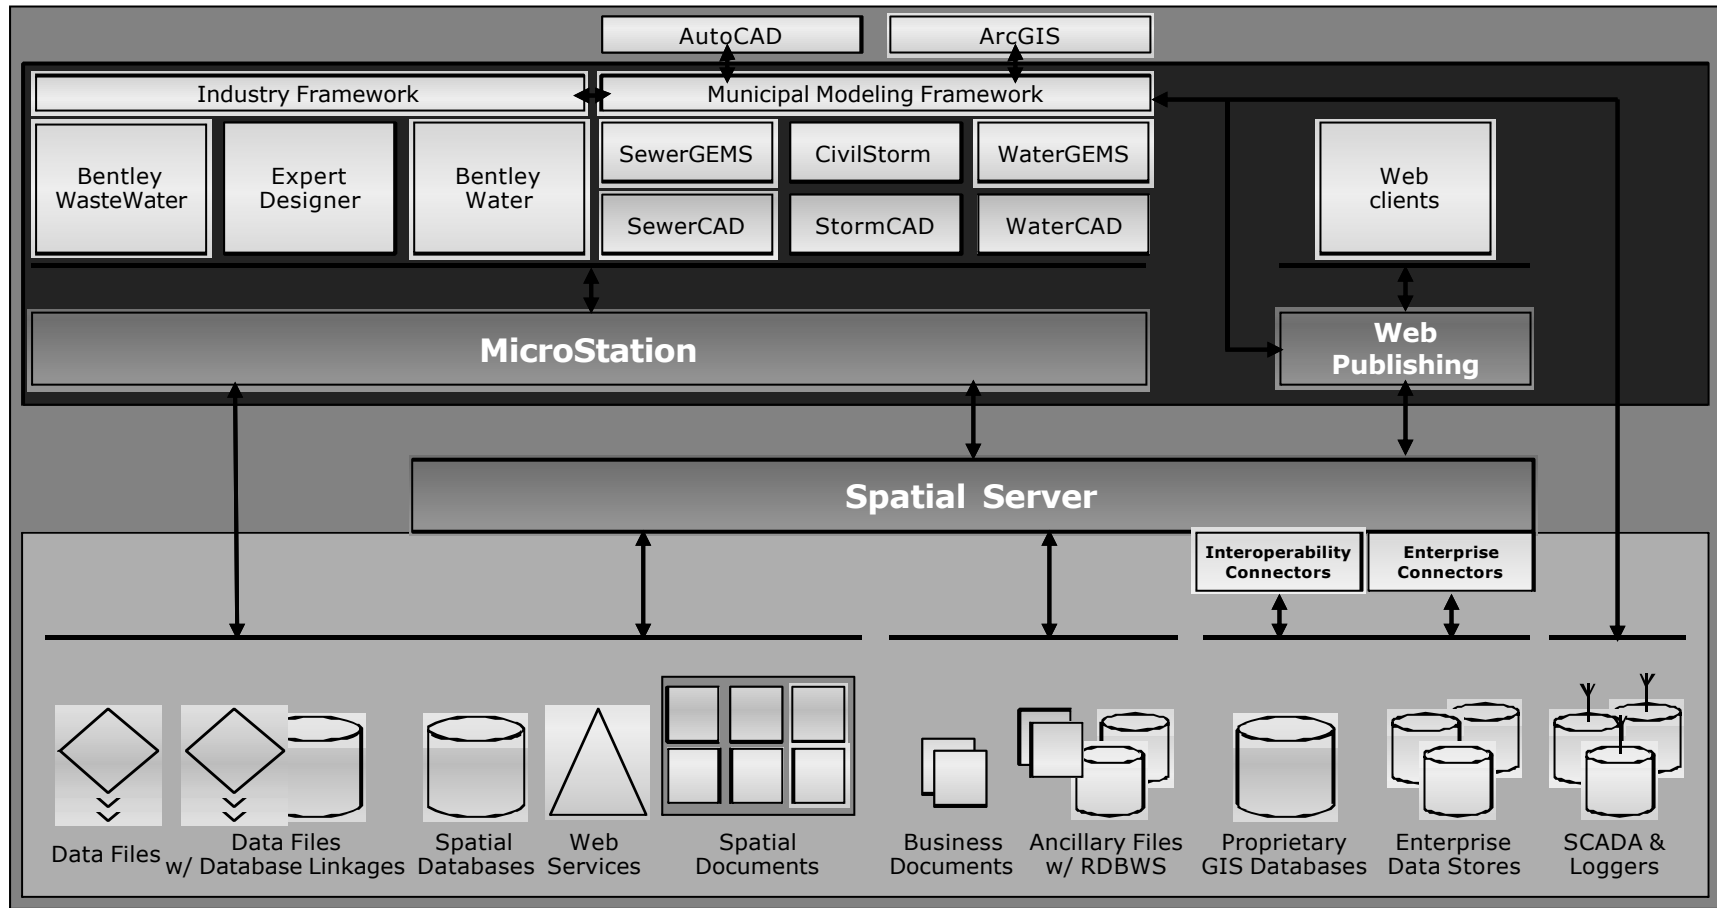

Storm

- CivilStorm
- StormCAD
- PondPack
- CulvertMaster
- FlowMaster
- PowerCivil
- GEOPAK
- InRoads Storm & Sanitary
- MXROAD
- Bentley OnSite

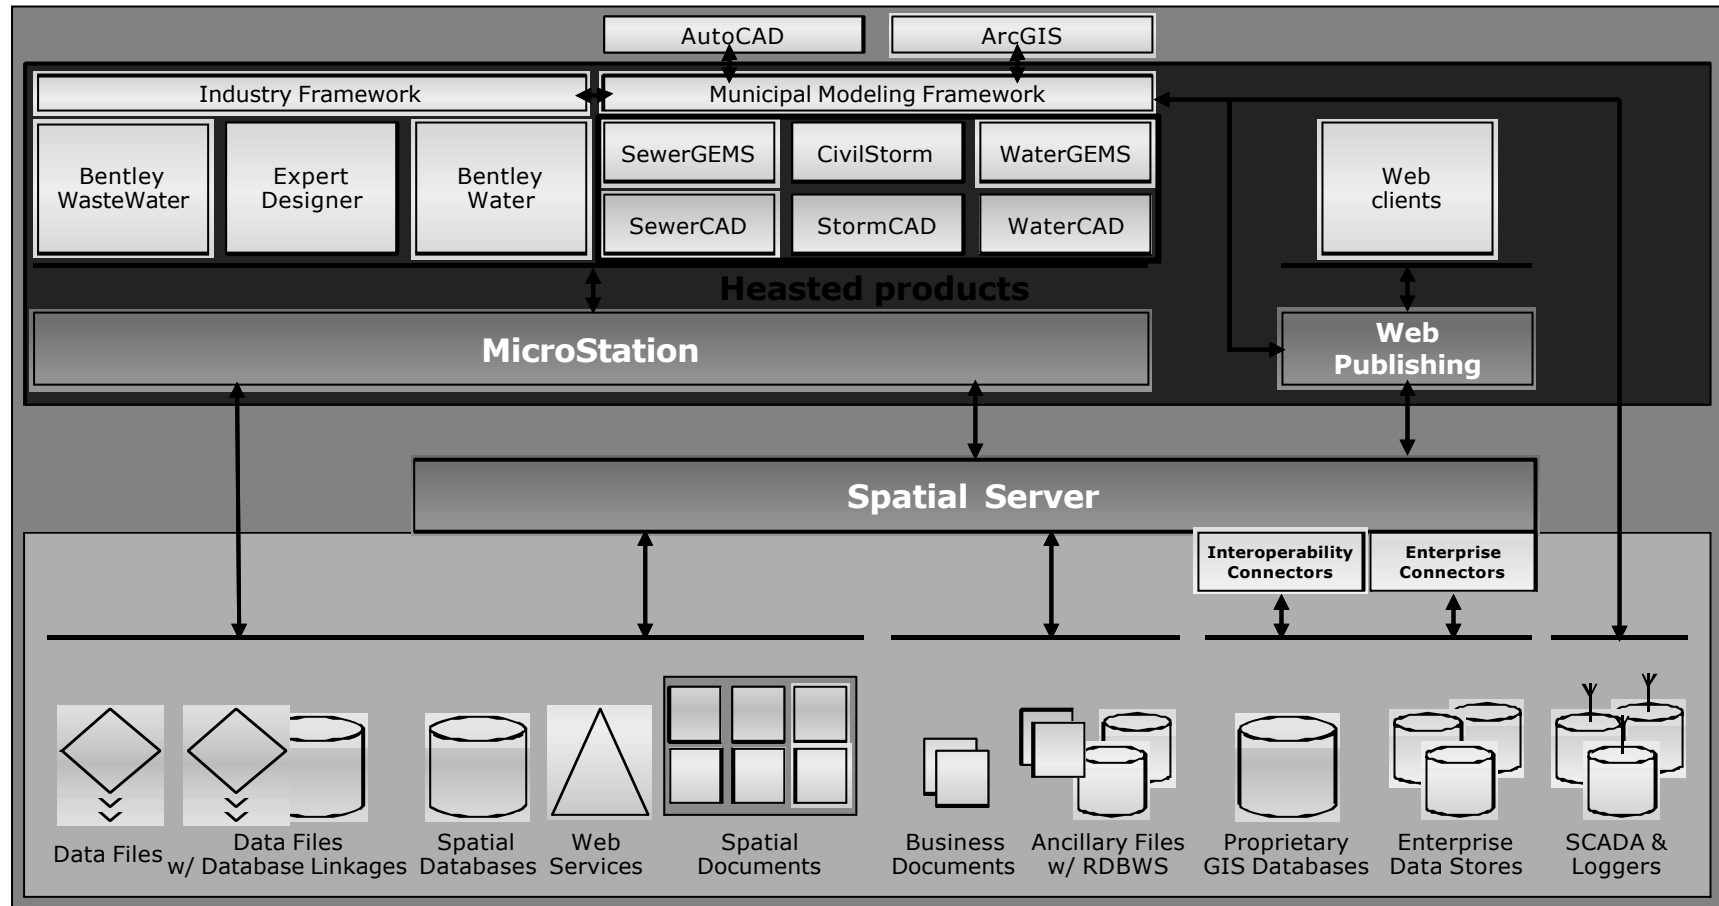

Water Solutions Architecture

WATER

WaterGEMS. Water distribution modeling with geospatial integration

WaterCAD. Water distribution modeling and design

— Darwin Designer. Network design automation

— Darwin Calibrator. Model calibration optimization

— WaterSAFE. Advanced water quality and security

— Skelebrator. Network reduction or simplification

HAMMER. Transient flow analysis and modeling

SCADAConnect. Supervisory and control data integration

SEWER

SewerGEMS. Urban sewer modeling with GIS integration

SewerCAD. Sanitary sewer design and modeling

CivilStorm. Stormwater management and dynamic modeling

StormCAD. Storm sewer design and modeling

PondPack. Detention pond design and analysis

STORM

HEC-Pack. Floodplain modeling

CulvertMaster. Culvert design and analysis

FlowMaster. Hydraulics calculator

Other...

GISConnect. CAD / GIS Interoperability

WaterObjects. .Net development environment

Mohid. Catchment, costal and estuarial modelling solution

The Water Solutions: Our Users

Engineering
Analysis and
Modeling

Water and
sewer utilities

Design

Mapping & Data
Management

Publicly-owned
utilities (L & C Gov)

Construction,
Inspection,
& Field
Engineering

Water suppliers

Information
Sharing &
Collaboration

SMEs, Consulting firms & EPC

Real-time
Operations &
Automation

Research and Academia

What Makes our Water Solutions Great?

1. Multi platform environment

An environment for every user with full GIS integration

2. Model building

Leverage virtually any data source

3. Model management

Streamlined editing with hydraulic intelligence

4. Hydraulic analysis

Engineering tools for real world decisions

5. Results interpretation

From model results to engineering knowledge

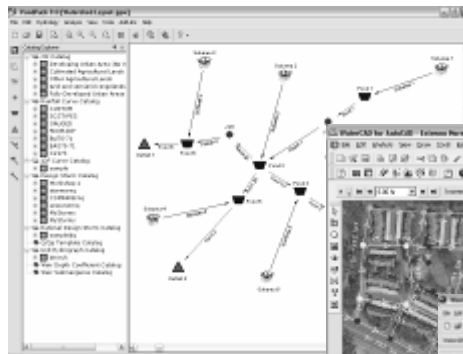

1. Multi Platform Environment

An environment for every user

BENEFITS

- ✓ Less data duplication. More integration
- ✓ Facilitate learning curve
- ✓ Increased team communication
- ✓ Users of different backgrounds can collaborate

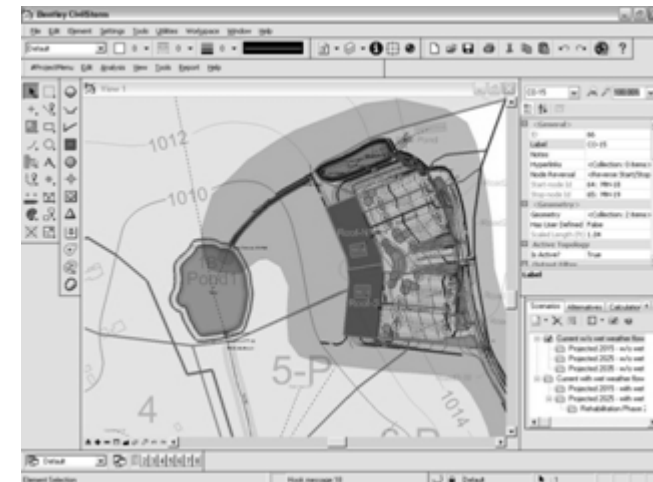

AutoCAD
WaterCAD shown

Stand-Alone
PondPack shown

ArcGIS
SewerGEMS
shown

...and MicroStation!

Available for:
CivilStorm
WaterGEMS
SewerGEMS

2. Model Building

Leverage virtually any data source

CAD drawings

Network topology, node elevations, scaled lengths, some physical data, etc.

Databases & spreadsheets

Demand information, operational strategies, field data, water quality, etc.

Geospatial data

Network topology, water consumption data, node elevations, diameters, materials, etc.

Model building tools

ModelBuilder. Multi-source model creation

LoadBuilder. Demand assignment from geospatial data

Shapefile & database synch. Synchronized model connections

TRex. Automated elevation extraction

Polyline to Pipe. CAD to hydraulic model conversion utility

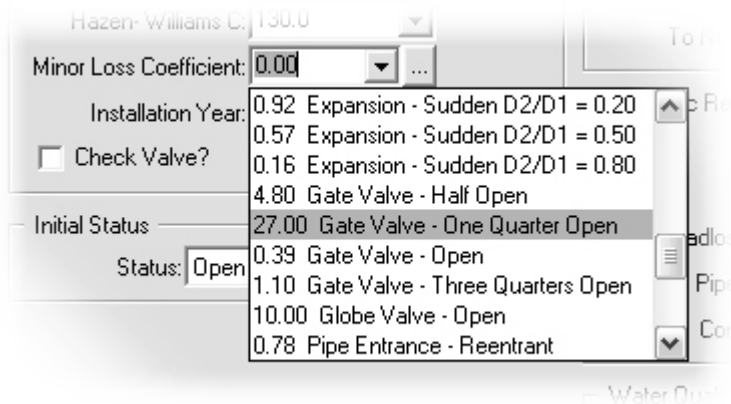

3. Model Management

Streamlined editing with hydraulic intelligence

Engineering Libraries & Prototypes

Enter information once, use it many times

FlexUnits

Change units on the fly

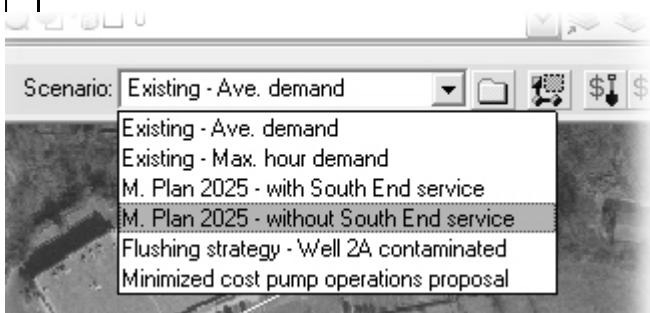

FlexTables

Fast and easy data edition

Scenario Control Center

Unlimited "what if" alternatives

	Label	Length (ft)	Diameter (in)	Material	Hazen-Williams C	Velocity (ft/s)	Check Valve?	Disch (gpm)
P-5	P-5	530	16	Ductile Iron	130.0	0.00	<input type="checkbox"/>	
P-6	P-6	1,657	16	Ductile Iron	130.0	0.00	<input type="checkbox"/>	
P-7	P-7

4. Hydraulic Analysis

Engineering tools for real world decisions

Avoid street flooding with **StormCAD**

Keep rainfall runoff problems at control with **PondPack**

Analyze complex systems with **CivilStorm**

Comply with local regulations with **CulvertMaster**

Save time with quick calculations from **FlowMaster**

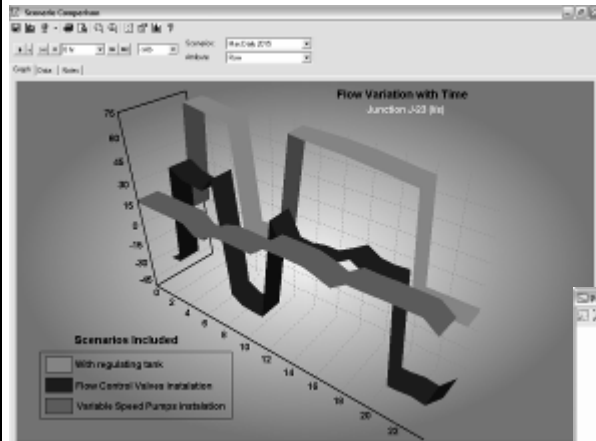

Find optimum designs staying under budget with **SewerCAD**

5. Results Interpretation

From model results to engineering knowledge

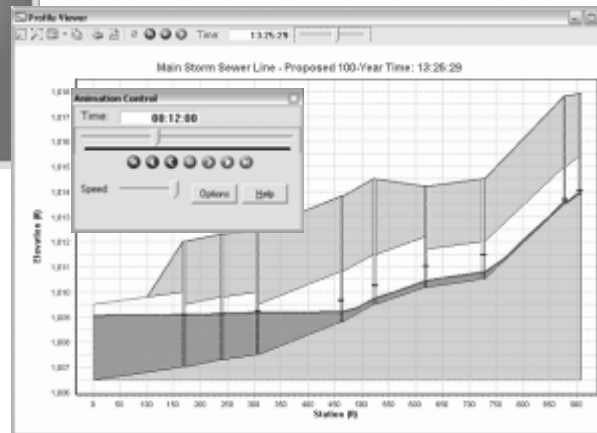

Multi scenario, time variable graphs

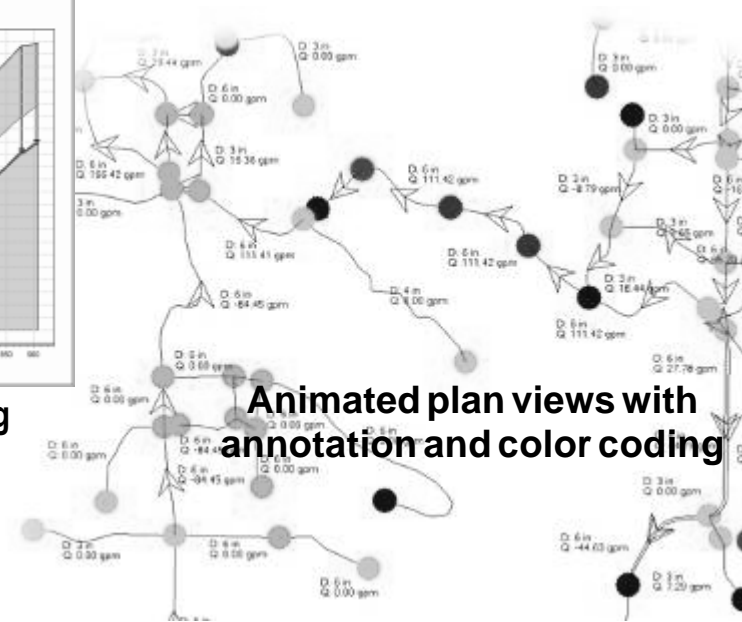

Customizable reporting

Label	Length (ft)	Diameter (in)	Material	Hazen-Williams C	Velocity (ft/s)	Check Valve?	Discharge (gpm)	Upstream Structure Hydraulic Grade (m)	D
P-5	530	16	Ductile Iron	130.0	0.00	<input type="checkbox"/>	-3	198.08	
P-6	1,657	16	Ductile Iron	130.0	0.00	<input type="checkbox"/>	-3	198.08	
P-7	479	16	Ductile Iron	130.0	0.00	<input type="checkbox"/>	-1	198.08	
P-8	1,883	16	Ductile Iron	130.0	0.02	<input type="checkbox"/>	-12	198.08	
P-9	364	24	Ductile Iron	130.0	0.02	<input type="checkbox"/>	-23	198.08	

Geospatial visualization

Advanced engineering profiling with animation

Animated plan views with annotation and color coding

SOLUTION

Products

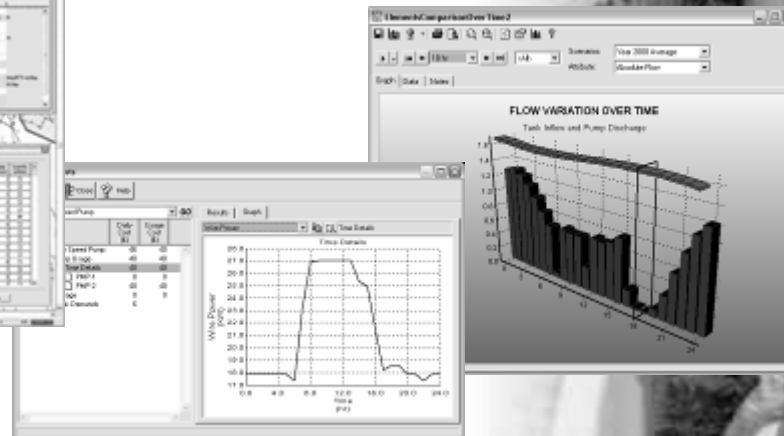

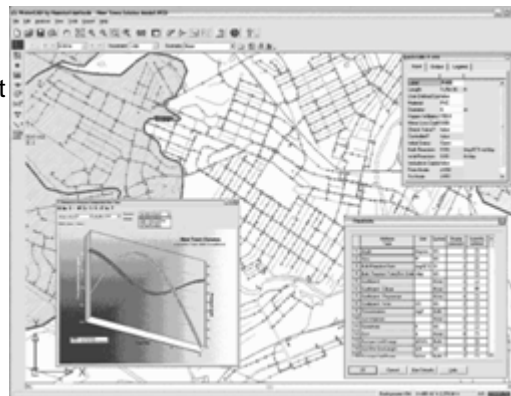

WaterCAD

Water distribution design, modelling and management

Automated fire flow analysis
Source trace and water age analysis
Easy-to-use native layout tools
Active topology alternatives
Variable speed pumping
Constituent water quality analysis
Drawing review tools
System head & hydrant curves
Tank mixing models
Rule-based & logical controls
Elevation Extraction (AutoCAD version)
Leakage and sprinkler modeling
Capital cost & energy analysis
Comprehensive demand management
Unidirectional flushing modeling
Shapefile synchronized connections
CAD to model automated conversion
Statistical result analysis
Persistent database connections
Scaled and schematic layout
Sub model management
Multi layer backgrounds for model layout
Integration with HAMMER for transient analysis
Animated pump and head loss curves

- Stand-Alone and AutoCAD environments
- Quick model building from any data source
- Easy-to-use layout and editing tools
- Unrivaled hydraulic analysis features
- Stunning results presentation tools

WaterCAD modules

Available for WaterCAD
Included with WaterGEMS

Darwin Calibrator

Automated model calibration

Darwin Designer

Optimized and automated network design.

Skelebrator

Hydraulic-smart network reduction

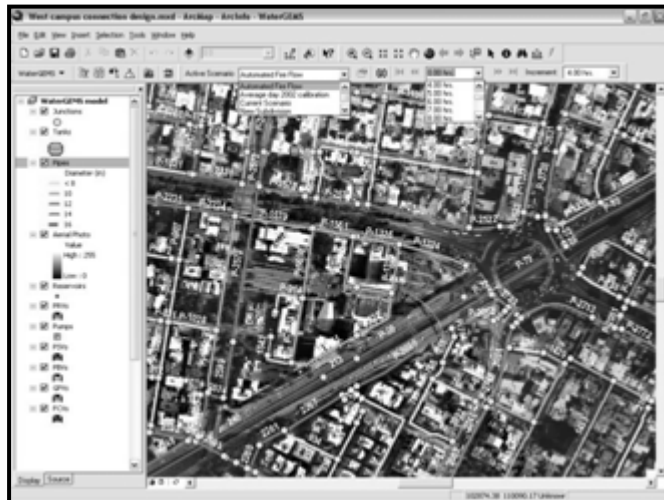

WaterSAFE

Advanced water quality and system vulnerability

WaterGEMS

Water distribution design and modeling with GIS integration

Hydraulic modeling

WaterCAD's hydraulic tools
& ALL available modules

ESRI Integration

ArcGIS integration and
streamlined model building

LoadBuilder

Water demand
assignment

TRex

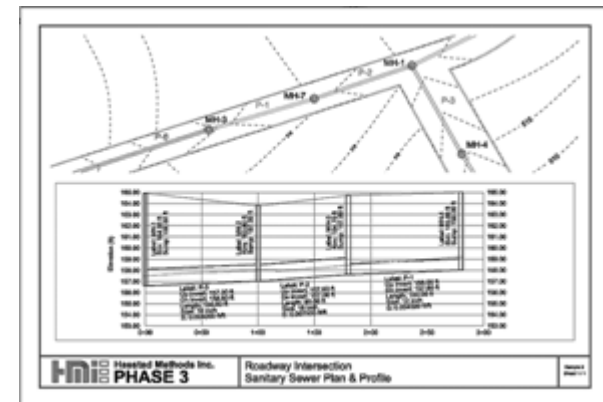

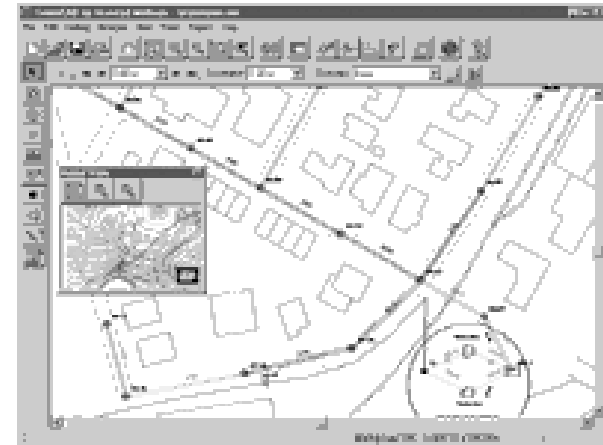

Automated
elevation
extraction

SewerCAD

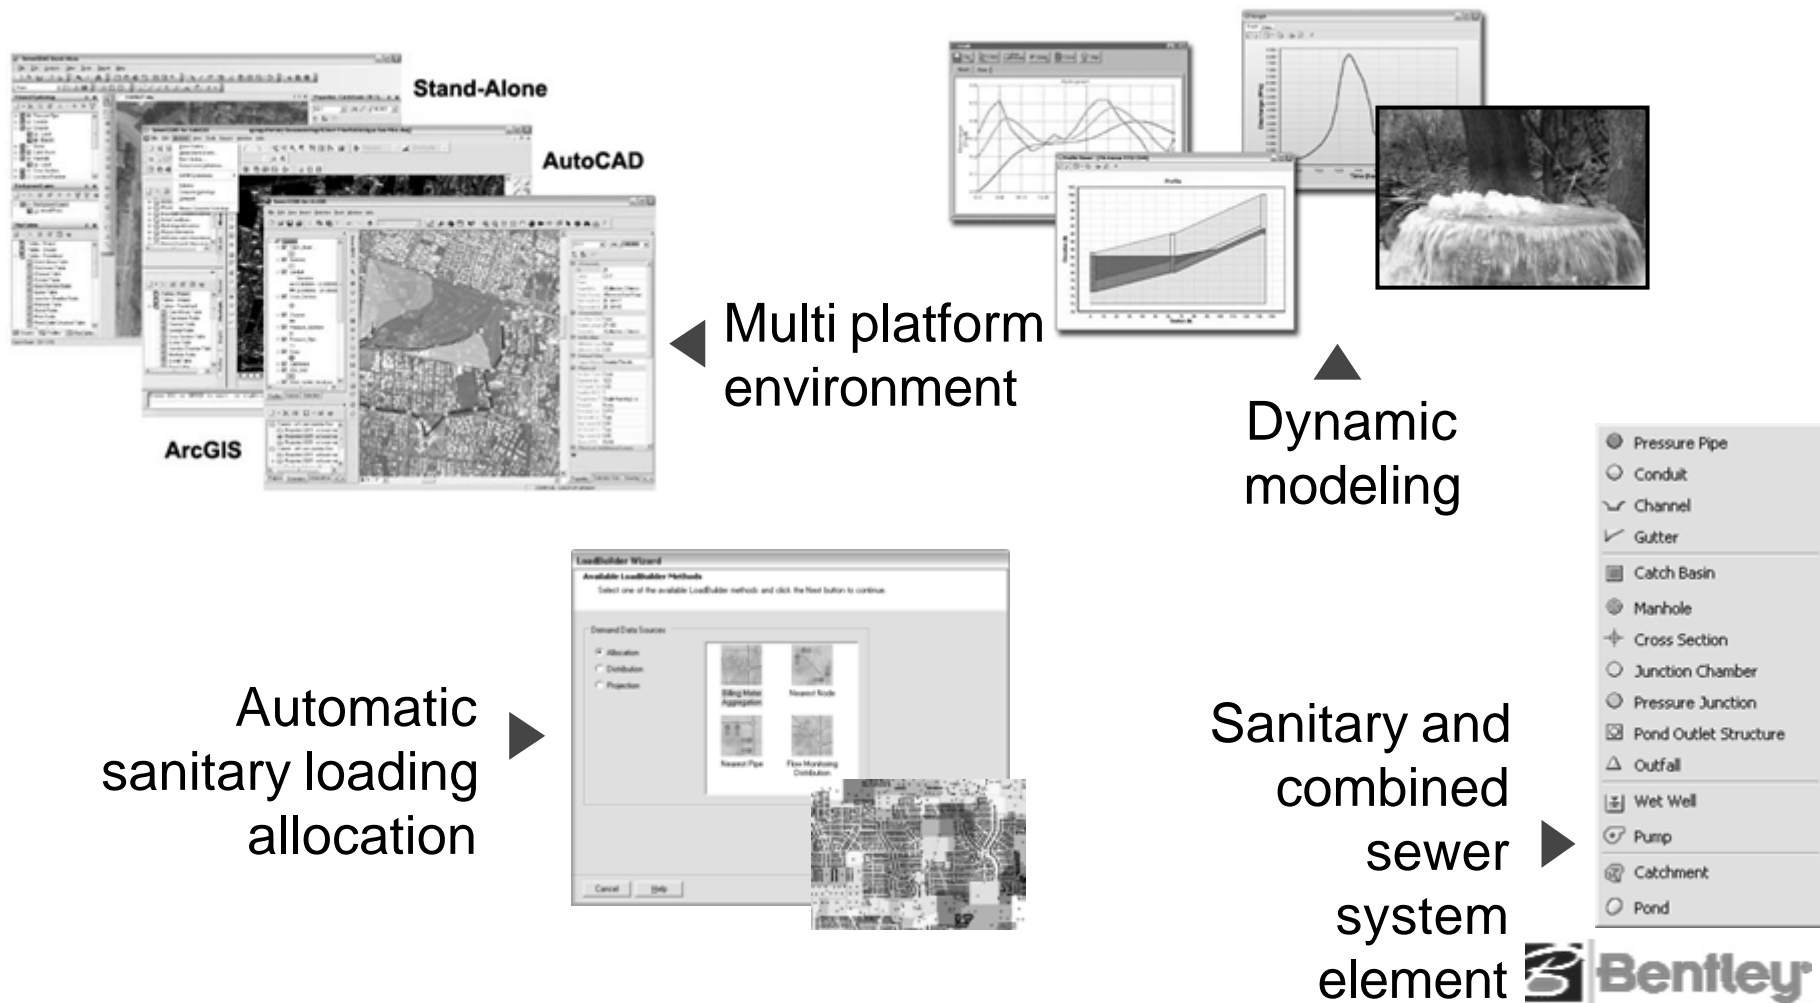

Sanitary Sewer Design & Modeling

- Sanitary and wet-weather modeling
- Steady-state & Extended Period
- Pressure & gravity systems
- Automated design for pipes & inlets

SewerGEMS

Sanitary and Combined Dynamic Sewer Modeling

HAMMER

Transient analysis and water hammer modeling

- Avoid catastrophic failure of pipes & equipment
- Use the rigorous Method of Characteristics
- Model any transient event
- Simulate any surge protection device
- Complete integration with WaterGEMS/CAD

Prevent system damage

Develop cost-effective surge control strategies

Trim construction and O&M budgets

Model any surge protection device

Minimize wear and tear on pipes

Simulate any transient condition

Design and operate with greater reliability

Eliminate costly over design

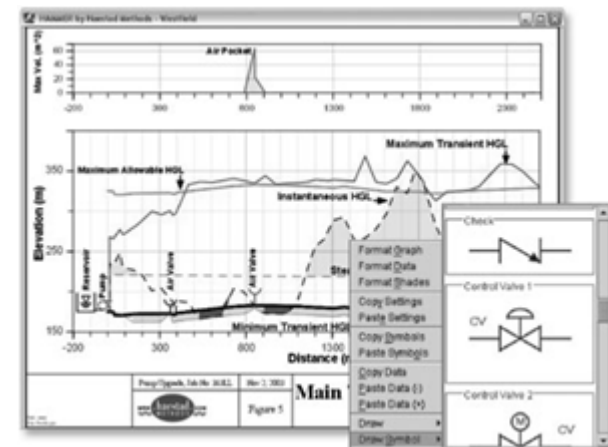

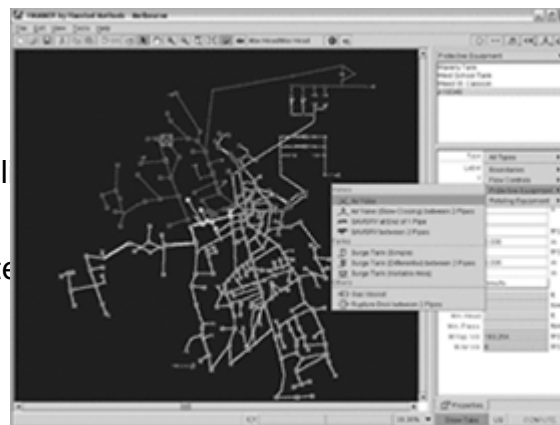

Ensure the longevity of your water system

Prepare for power failures

Protect your operators

Improve water quality

Minimize service interruptions

StormCAD

Storm sewer modeling and design

Capital cost analysis

Rational method hydrology

Gradually-varied flow analysis

HEC-22 methodology

Drawing review tools

Shapefile synchronized connections

Persistent database connections

Scenario manager

Scaled and schematic layout

Background support for model layout

CAD to model automated conversions

Profile manager

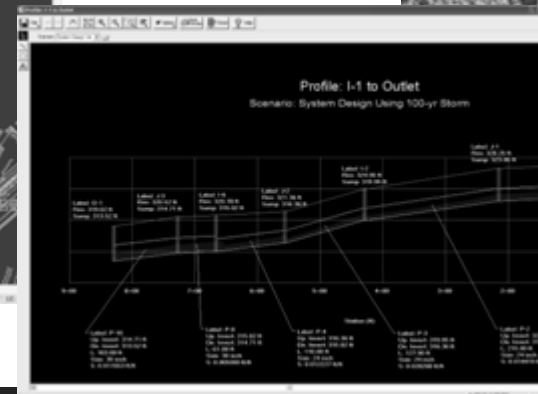

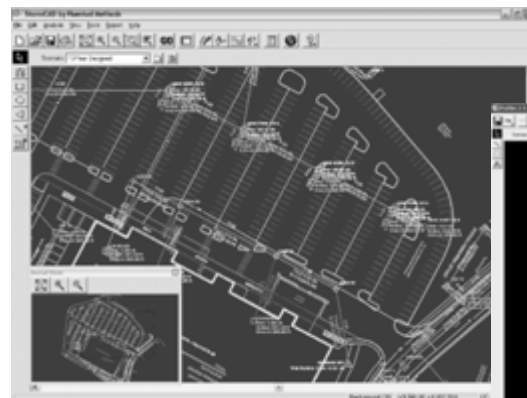

HEC-22 and AASHTO detailed reports

Curved pipe alignments

System capacity analysis

Accepted by FEMA

- Stand-Alone & AutoCAD interface
- Quick model building tools
- Easy-to-use layout & editing tools
- Automated system design
- Stunning result presentation tools

CivilStorm

Fully-dynamic stormwater analysis

Stand-Alone , Micro Station and
AutoCAD interface

Fully-dynamic modeling

Interconnected system modeling

Water quality assessments

Complex flow regime analysis

NPDES permit modeling

Scaled layout in Stand-Alone interface

Variety of methods for computing
runoff

Profile manager

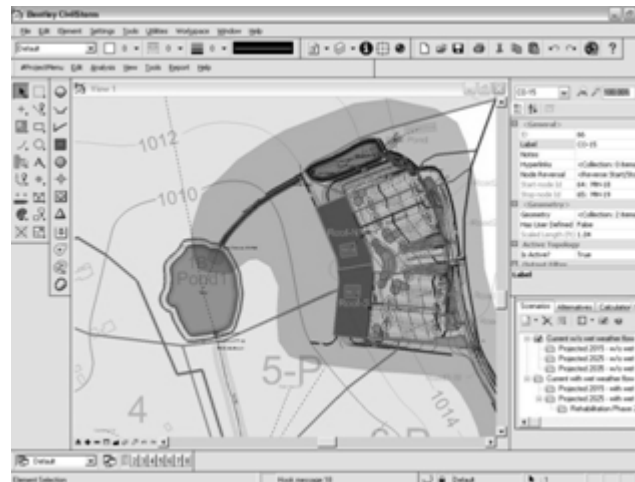

Scenario manager

Comprehensive engineering libraries

Model looped systems and diversions

Attenuate hydrographs due to storage

- Model in geospatial environments
- Analyze complex stormwater systems
- Optimize system performance
- Present comprehensive results
- Experience the dynamic calculation engine

ID	Label	Start node ID	End node ID	Start invert (ft)	Stop node ID
188	Conduit	188	Conduit 1000	270	CS-406
189	Conduit	189	Conduit 101	280	CS-406

308	Man	308	Man 3		
308	Lateral	308	Lateral 3		

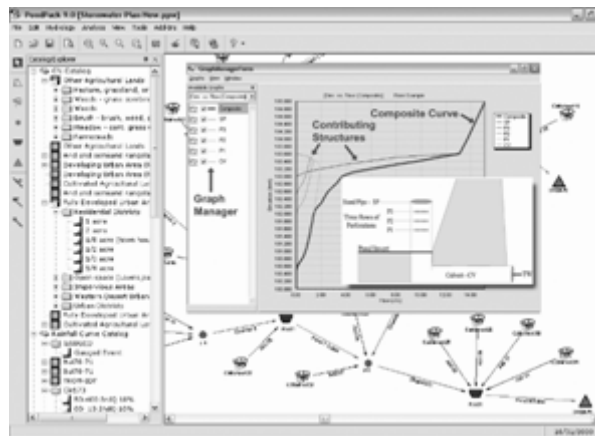

PondPack

Detention pond design and urban hydrology analysis

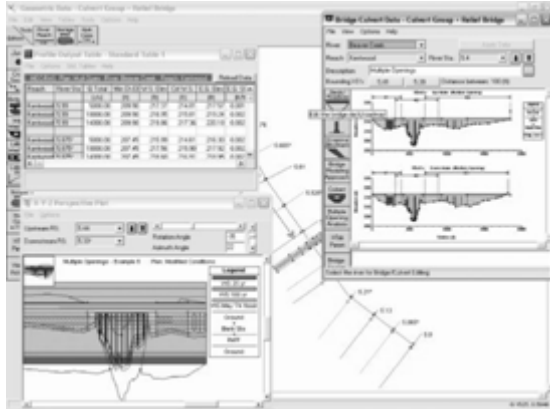

- Automate pond and outlet design
- Track project history
- Model interconnected ponds
- Account for travel time and time of concentration
- Perform complete system analyses

Interconnected pond modeling
Limited water quality analysis
Detailed graphing and reporting
ProjectWise integration
Accepted by FEMA
Intuitive interface
Unlimited number of storm events
Industry-standard runoff methods
Time of concentration calculator
Numerous peak flow methods
Water quality BMP calculations

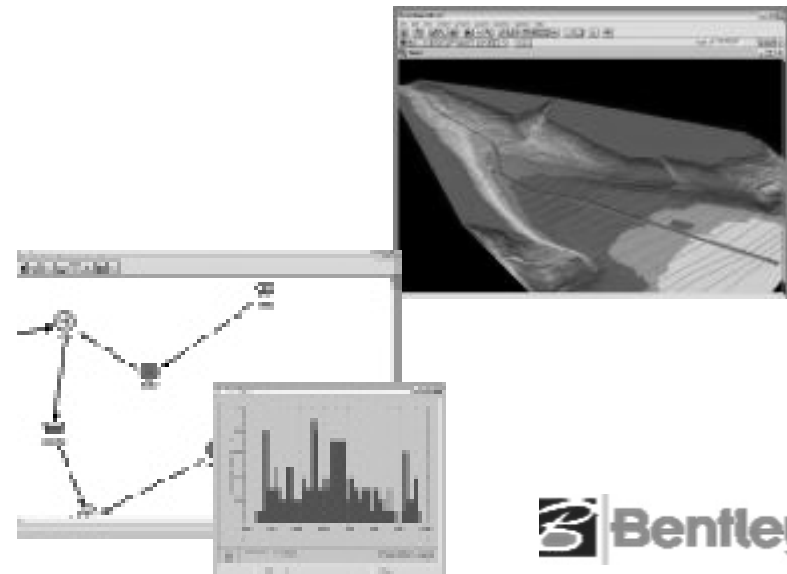

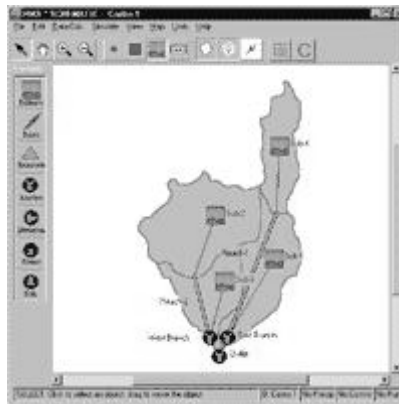

HEC-Pack

From Floodplain Hydrology to River Analysis

- Graphical HEC-1 for flood hydrology calculations
- HEC-HMS for hydrologic modeling
- HEC-RAS for river (floodplain) analysis
- Optimize system performance
- HEC-GIS for data sharing between HEC-RAS and ArcGIS

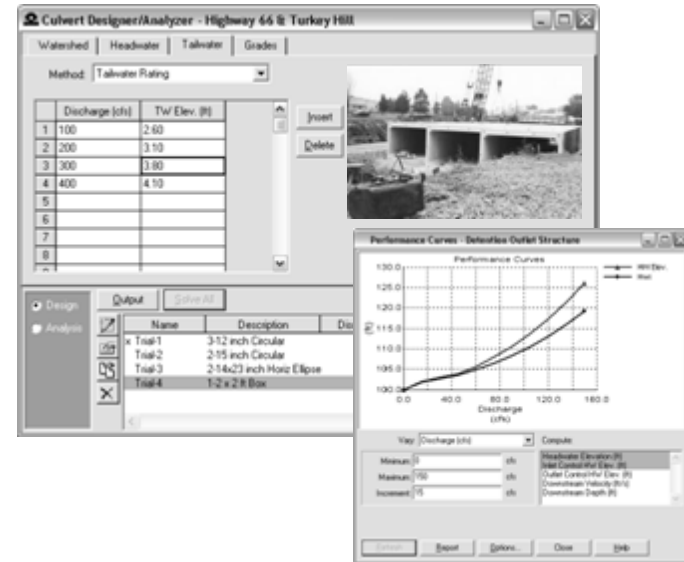

Bentley provides thousands of engineers with HEC software, documentation, and support for a variety of modeling tasks, from floodplain hydrology to river analysis to GIS integration. These important programs are all included in the HEC-Pack.

CulvertMaster

Culvert Design & Analysis

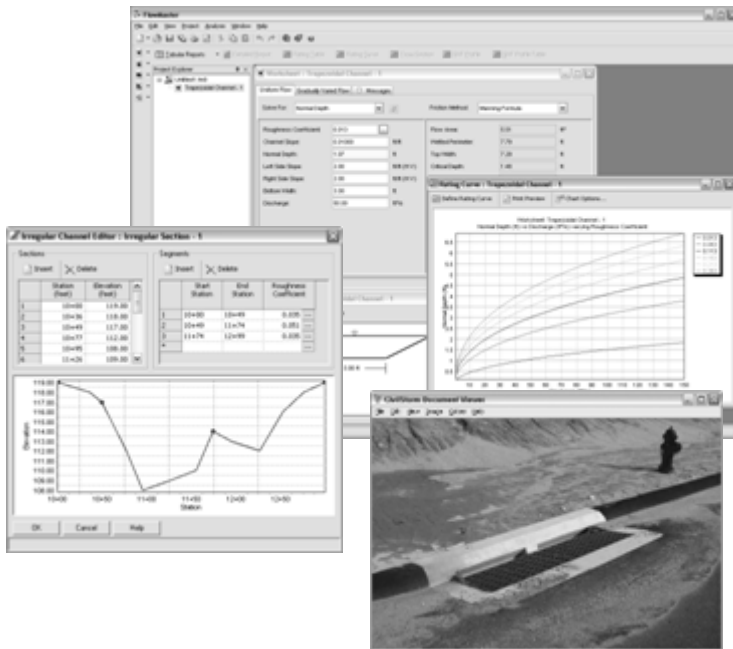

Model any situation that requires the design or evaluation of a culvert using HDS-5 methods, including roads, driveways, embankments, etc.

FlowMaster

Hydraulics calculator

Evaluate the hydraulics of virtually any type of hydraulic structure, including pipes, ditches, open channels, weirs, orifices, and inlets.

SOLUTION

Example Applications

Rehabilitation Planning

- Pipe network rehabilitation
- Find the most cost-effective solution
- Overcome pressure deficiencies
- Projected demand increases (20 years ahead)
- WaterCad and Darwin Designer (genetic algorithm optimisation)

**Thames Water DMA in UK:
1,500 pipes**

Rehabilitation Planning (cont.)

“Manual” Solution

£4.16M

GA Optimised Solution

£2.14M

Capital Investment Planning (CIP)

- Growing demand
- Service level improvements
- Optimise design
- Meet criteria
 - Flow
 - Pressure
 - Tank storage
 - Minimum cost
- Master plan

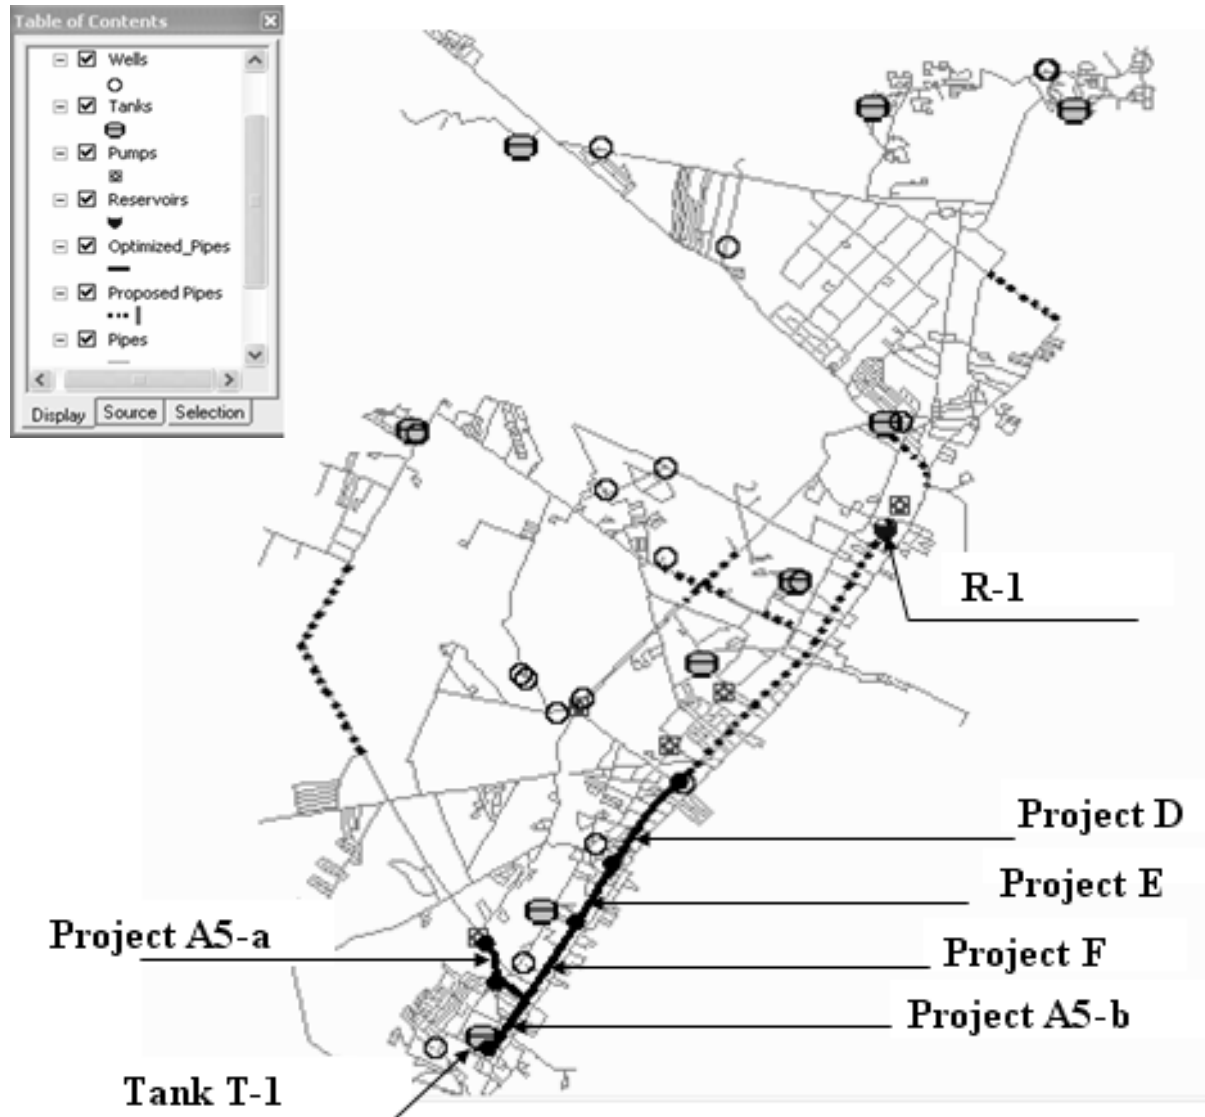

City in USA:

- 300 000 inhabitants
- Contain 31 reservoirs, 14 wells, 116 pumps and more than 1600 km of pipelines

CIP: Example Results

CIP: Pipe Installation Priority

Pipeline Project	8% Growth (20.06 mgd)		13% Growth (21.00 mgd)		18% Growth (21.92 mgd)		24% Growth (23.03 mgd)		30.4% Growth (24.22 mgd)	
	Dia	Cost (10 ³)	Dia	Cost (10 ³)	Dia	Cost (10 ³)	Dia	Cost (10 ³)	Dia	Cost (10 ³)
PROJECT A5-a	12	169.8	16	212.3	16	212.3	16	212.3	24	283.0
PROJECT A5-b	20	511.3	20	511.3	24	568.1	16	426.0	24	568.1
PROJECT E	0	0	0	0	0	0	16	340.0	24	453.3
PROJECT F	0	0	0	0	0	0	20	874.8	24	972.0
PROJECT D	0	0	0	0	0	0	0	0	24	681.9
Total Cost (\$)	681,090		723,540		780,350		1,853,100		2,958,300	

Sewer Deterioration Modelling

Causes of Sewer Flooding

Sewer Deterioration Modelling

Sewer Attribute Base

- Pipe performance
- Pipe service
- Installation age / era
- Size
- Material
- Depth
- Gradient
- Function
- Cross section
- Soil, traffic load, mining etc.

**Timisoara city in Romania:
combined sewer system**

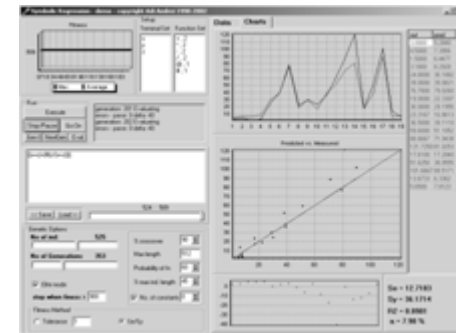

Solution Techniques

- Bentley SewerGEMS for Hydraulic performance assessment
- Genetic Programming for deterioration modeling
- Bayesian Probabilistic Network for Failure Risk Assessment and Uncertainty

SewerGEMS

Bentley GP kernel

Bayesian Network

Deterioration Model Example

- CoD = 90%
- op – operational condition grade
- Age – age of sewer
- s24 – 'section 24 sewers' (old, small bore)

$$BL = 0.091978 \cdot op + 0.10927 \cdot Age \cdot s24$$

Failure Risk Model Example

Leakage Detection

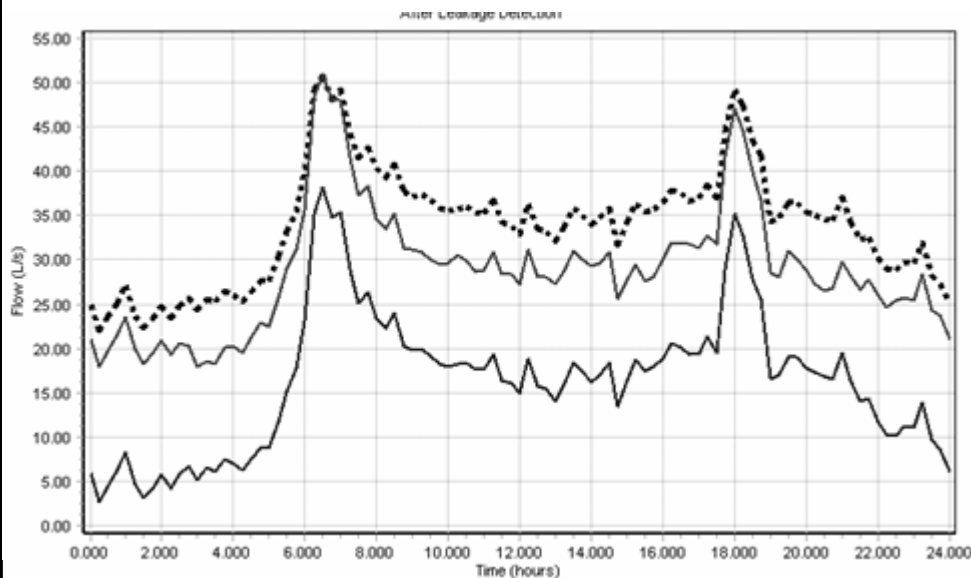

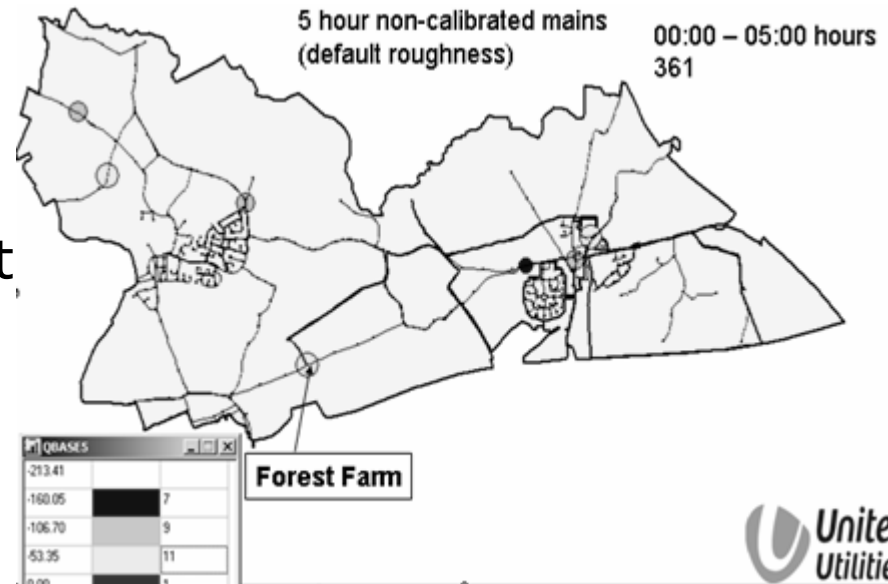

- Cause water companies / utilities lose revenues (NRW)
- Use hydraulic model as a base
- Integrate with optimization technology
- Predict leakage hotspots (unreported leakages)

DMA in UK: Oldham area

Leakage Detection Benchmark

- A DMA water system in UK
- High leakage rate
- Apply the latest leakage detect model in **WaterGEMS**
- Enable informed field survey

Real-time SCADA Modelling

Security

- Planning and outage analysis
- Real time predictions
- Leakage detection & Demand inversion
- Forensics

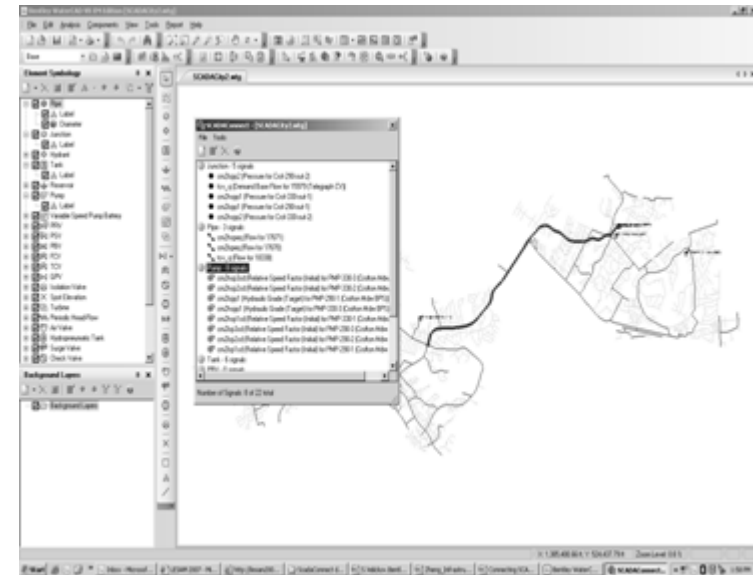

Energy Management

- Optimal pumps scheduling

Water Quality

- Emergency management
- Planning
- Forensics

Operator Training & Learning

City in Greece:

- 47 signals were mapped and used in WaterGEMS for real-time decision support
