About Bentley Communities

Bentley constantly and enthusiastically engages with AEC professionals and academia throughout the world to help shape technologies and advance best practices. Through technology and innovation, Bentley empowers individuals and organizations to improve themselves and their communities.

BE Communities

The BE Communities website is the destination for the world's infrastructure community members to connect, communicate, and learn from each other. This professional networking is done through a variety of means, including:

- [Forums](#) – for exchanging ideas and discussing a wide range of technical subjects.
- [Wiki](#) – a free-form resource within the BE Communities for creating and maintaining reference content.
- [Blogs](#) – online journals for communities and individuals to publish commentary, opinions, and ideas.
- [Resource Galleries](#) - share and exchange images and files with community members

BE User Group

The BE User Group is the official global program for independent user groups dedicated to sharing their ideas and building their knowledge about Bentley products. User group members exchange ideas and experiences, receive training, and provide feedback to Bentley by holding user meetings and conferences.

The result of this networking and training is increased knowledge, an invaluable connection with other users, and enhanced productivity for organizations.

BE Careers Network

For students and educators, the BE Careers Network brings a wealth of learning resources to the classroom and beyond. From software, a resume center for students, online training via blended learning, scholarships and so much more, the BE Careers Network provides a huge array of offerings to both students and educators. For more information, visit the [BE Careers Network page](#) and the [BE Communities website](#).
